

MINI PROJECT ABSTRACT

1. Ad-free post web-based system

Online shopping websites makes our life simpler. We can buy new things without stepping out of our home. However, if we want to sell old things online then, there are very few options available. This website let users to post ads regarding used items and also allows users to purchase items which are posted by other users on the website.

2. Users in the Project

In this online ad-free web based system, there are mainly two users

- Admin
- End user

Admin:-

He is an authorized person who has all the rights in the website including user management and ads management.

User :-

Who can post ads and purchase items from other users.(acts as both customer and seller)

3. Functionalities

In this project there are many functionalities for different users of the system. In the admin side admin can manage all the functionalities of the system .He can view all the ads posted by the user , manage the ads and even delete ads if needed. users can acts as both customer and seller where they can post ads and also can view the ads posted by other users.

4. Natural System Studied

In natural system user sells their used products directly to the customer. Sellers doesn't get reasonable price for their products, due to lack of customers.

5. Designed System

OLX.com is an online platform where user can post ads and purchase items

6. Technologies Used

Front-end: HTML, CSS

Back-end: PHP

7. Weekly Plan

Creating a module and its functionalities in each week.
